# ELEKTRA

7500 PCS/H LOADING MACHINE

# ELEKTRA

- ELEKTRA is the new LM ELETTRTECNICA loading machine, and thanks to its innovative systems, it can reach an hourly production of 7.500 pcs.
- The new technology allows to achieve these high performances, without shaking the material inside the casing.
- Traslation and metering system of powder and lead are controlled by CNC system
- Each phase of ELEKTRA is automatically controlled by analog sensor and photocells, which monitor every operation of the machine.
- ELEKTRA is equipped with a real automatic waste system, without material losing (powder, lead and wad). In case of anomaly, the machine does not stop, but does not introduce the products inside the case after the detected errors.
- A touch screen panel, allows you to control every parameter of the machine, functionality and anomalies. It has the possibility to set up and verify a series of ELEKTRA utilities.
- It has a double lubrication system, grease for moving parts and lubricating oil for pre-edging of the pots.
- All the electrical and pneumatic components used on ELEKTRA are of the highest quality.
- ELEKTRA is equipped with an ENERGY SAVING system.

- Hourly production: 7.500 pz/h
- Gauges and accessories: gauge 12 to 28 shutter, felt wad, BIOR wad, steel shot, slug, buck shoot, cardboard/disk.
- Dimension: see the lay out
- Installed power 5kw
- Air :650/700 nl/min
